Important notice – limits of this FTO pre-screen

1. This is an automated (AI-assisted) pre-screen. It is not legal advice and not a freedom-to-operate opinion, and it does not replace review by a patent attorney.
2. The screened corpus is restricted to the LNP/lipid field (EP/US/WO; defined CPC classes, keywords and applicants). Rights outside this restriction – including utility models, national rights of other countries and supplementary protection certificates – are not covered.
3. Markush/generic claims may cover structures that are not individually indexed in the corpus. No Markush search (e.g. CAS STN MARPAT) was performed. The formula test is only applied to claims whose text is in the corpus; formulae embedded as images may be missing.
4. Legal status (grant, opposition, limitation, lapse, term, PTA/PTE, SPC, UPC opt-out) reflects a data snapshot of 2026-08-23 and may be stale or incomplete. Expiry dates are estimates.
5. Claim texts may be machine translations or OCR text; only the text in the language of proceedings, as granted or maintained, is authoritative.
6. Pending applications: claims may change before grant; divisionals and continuations may be filed. Applications not yet published (up to 18 months from priority) are not covered.
7. The assessment rests on the product/process data and assumptions listed under "Subject of the screen". If they change, the result changes.
8. Claim construction, equivalence and exemptions (experimental use, Bolar, safe harbor) depend on the individual case and current case law; prosecution files were not reviewed.
9. AI models make mistakes (wrong substituent mapping, wrong chain-length counts, overlooked provisos). Verify quotes and feature mappings against the original document before any decision.

- Step E.EP1000009B1: input shortened (description excerpt d2 -101 bytes, description excerpt d1 -170 bytes, claim 1 -257204 bytes)

2. Subject of the screen (product profile as understood)

Test product LNP-1

Ionizable lipid

Name	ALC-0315 / ALC-0315
SMILES	CCCCCCCCC(CCCCCC)C(=O)OCCCCCCN(CCCCO)CCCCCCOC(=O)C(CCCCCC)CCCCCCCC
InChIKey	QGWBEETXHOVFQS-UHFFFAOYSA-N
Formula (computed by the app (OpenChemLib), not by the model)	C48H95NO5
Molecular weight	766.3
Structure description	Tertiary amine with two ester arms. [Computed by the app: head group hydroxyalkyl-tert-amine (OCCCCN); amine: tertiary; linkers: 2 x ester; chains: Acyl C16 branched at position 2 (8+6) | Acyl C16 branched at position 2 (8+6).]

Other lipids

ROLE	NAME	SMILES	PEG-MW
helper lipid / phospholipid	DSPC / 1,2-distearoyl-sn-glycero-3-phosphocholine	DSPC-SMILES	
sterol	cholesterol / Cholesterol	CHOL-SMILES	
PEG-lipid	ALC-0159 / ALC-0159	PEG-SMILES	2000

Composition (mol-% of total lipid)

ionizable lipid	46.3
phospholipid	9.4
sterol	42.7
PEG-lipid	1.6
Basis	total lipid, nominal (as charged)
N/P	6

Payload

Type	mRNA
Nucleoside modification	m1Ψ

Particle

Size (nm)	80
PDI	0.1

Process

Mixing principle	T-junction
Flow rate ratio aqueous:organic	3
Ethanol at mixing (%)	25

Use

Route of administration	i.m.

Acts and markets

Development stage preclinical

Markets DE, EP, US

COUNTRY	ACT	TIMING	PLANNED FROM	PURPOSE

App checks

- Claim 1: result recomputed from the feature rows (literally not met → literally possible)
- Risk raised from very low (1) to medium (3): no feature is clearly not met
- Risk raised from medium (3) to cannot be assessed: claim text incomplete: the formula exists only as an image and was not read
- Claim 1: red-team result more favourable (literally not met), not adopted
- The red-team review considers a lower risk arguable (very low (1)): not adopted automatically, question for counsel

Short verdict (Claude)

Claim chart: Claim 1 (compound)

Result (computed from the feature rows)	literally possible
Model	literally not met
Red team	literally not met
Final	literally possible
Flags	formula not available, literal result recomputed

FEATURE	CLAIM WORDING (QUOTE)	QUOTE CHECK	PRODUCT	VERDICT	REASONING / CONSTRUCTION / CLARIFICATION
M1	*A compound having the following structure of Formula (I): [chem]*	✔ found verbatim in the claim	46.3 mol-% [P1]	unclear (set to "unclear" by the app: formula not available; Model: not met)	Reasoning M1 — Construction: broad = broad; narrow =
M2	*G1 is C1-C6 alkylene*	✔ found verbatim in the claim	46.3 mol-% [P1]	■ met	Reasoning M2 — Construction: broad = broad; narrow =

Formula test (Markush) M1: formula not available (Model: does not fall under the formula)

Scaffold	guessed
Distance (failing variables)	1
Confidence	medium
Named individually	no

VARIABLES	DEFINITION	QUOTE CHECK
R1	R1 and R2 are each independently C6-C24 alkyl	found verbatim in the claim

MAPPINGS M1 (ALL MET: NO)	FRAGMENT	VERDICT	REASONING / CONSTRUCTION / CLARIFICATION
R1	C16	not met	x

Dependent claims (fallback positions)

CLAIM	ADDED FEATURE (QUOTE)	VERDICT	CHAIN (APP)	NAMED INDIVIDUALLY
2	A lipid nanoparticle comprising the compound of claim 1.	unclear: x	possible	n/a

Fallback positions

- Claim 1 → Claim 2 (claim 3): r

Construction hints from the dependent claims

- conjugated lipid (Claim 3): broader than PEG-lipid

Red team (patentee view)

Further routes of attack

- indirect infringement (medium): Supply

Revised risk of the red team: very low (1). rt

Open questions for counsel

- Measured mol-% in the particle?
- Analytics

Design-around ideas (ideas only: technical hypotheses, to be validated technically and legally)

- M2: mol-% below 40 [narrow margin] - to be validated technically

Exemptions and role (model view)

Experimental-use exemption (§ 11 No. 2 PatG)	open
Regulatory (Bolar) exemption (§ 11 No. 2b PatG)	yes
US safe harbor (35 U.S.C. § 271(e)(1))	n/a
Tipping point	from the first offer
	Exemptions
Direct infringement by the user	yes
Indirect / contributory infringement	open
	Role

EP1000002B1 - TITLE EP1000002B1

6. Patent rights not analysed, and why

no claim text in the corpus (2)

PATENT RIGHT	TITLE	LEGAL STATUS	EXPIRY (ESTIMATE)	REASON
EP1000012B1	TITLE EP1000012B1	granted, in force in DE (unverified, no record; treated as in force)	2035-06-01	no claim text in the corpus (biblio only); check a family member
EP1000011B1	TITLE EP1000011B1	granted, in force in DE (snapshot 2026-08-23)	2035-06-01	no claim text in the corpus (biblio only); check a family member

legal status (expired/lapsed/revoked) (1)

PATENT RIGHT	TITLE	LEGAL STATUS	EXPIRY (ESTIMATE)	REASON
EP1000005B1	TITLE EP1000005B1	expired (snapshot 2026-08-23)	2020-03-01	Legal status: expired (snapshot 2026-08-23); expiry (estimate) 2020-03-01; no claim chart (only at depth "deep")

triage C (different subject) (1)

PATENT RIGHT	TITLE	LEGAL STATUS	EXPIRY (ESTIMATE)	REASON
EP1000007B1	TITLE EP1000007B1	granted, in force in DE (snapshot 2026-08-23)	2035-06-01	Triage C: Reason EP1000007B1

7. Next steps

PRIORITY	STEP	WHY
1	Markush search	Gap

Always recommended (method)

- Markush/structure search in CAS STN (REGISTRY + MARPAT) and/or Derwent Markush for the ionizable lipid and the PEG-lipid.

- Current legal status from the registers (EP Register incl. opposition file, DPMAregister, UPC register/opt-out, USPTO Patent Center, PTAB), INPADOC family, SPC/PTE.
- File-wrapper review for the top-rated rights (amendments, statements).
- Analytical data to resolve unclear features (measured mol-% in the particle, size by the method named in the patent, pKa, encapsulation).
- Written opinion of a patent attorney before GMP or commercial commitments.
- Monitoring of pending applications and divisionals/continuations of the affected families and the watched applicants.

Open questions

- Question 1

Usage

18 calls; 890747 / 26629 bytes in/out

How to read this report

RISK SCALE (1 TO 5; "CANNOT BE ASSESSED" IS NOT A LOW RISK)

●○○○○ very low (1) ●●○○○ low (2) ●●●○○ medium (3) ●●●●○ high (4)

●●●●● very high (5) ? cannot be assessed

MARKS

- ✔ found verbatim in the claim quote found verbatim in the claim text (checked by code)
- ≈ DEVIATING quote found only with an omission or relaxed spelling, to be checked by hand
- ✖ NOT VERIFIED quote not verified; the row is treated as unclear

Verdict "met" means the claim feature is found in the product; it is the adverse reading for the product.

METHOD

Quotes are verified against the claim text, numeric ranges and structure matches are computed in code, and the final risk is the more adverse of the claim chart and the red-team review. The model only translates and explains. Evidence computed by the app only adds flags, questions and risk floors; it never lowers a risk.

Important notice – limits of this FTO pre-screen

1. This is an automated (AI-assisted) pre-screen. It is not legal advice and not a freedom-to-operate opinion, and it does not replace review by a patent attorney.
2. The screened corpus is restricted to the LNP/lipid field (EP/US/WO; defined CPC classes, keywords and applicants). Rights outside this restriction – including utility models, national rights of other countries and supplementary protection certificates – are not covered.
3. Markush/generic claims may cover structures that are not individually indexed in the corpus. No Markush search (e.g. CAS STN MARPAT) was performed. The formula test is only applied to claims whose text is in the corpus; formulae embedded as images may be missing.
4. Legal status (grant, opposition, limitation, lapse, term, PTA/PTE, SPC, UPC opt-out) reflects a data snapshot of 2026-08-23 and may be stale or incomplete. Expiry dates are estimates.
5. Claim texts may be machine translations or OCR text; only the text in the language of proceedings, as granted or maintained, is authoritative.
6. Pending applications: claims may change before grant; divisionals and continuations may be filed. Applications not yet published (up to 18 months from priority) are not covered.
7. The assessment rests on the product/process data and assumptions listed under "Subject of the screen". If they change, the result changes.
8. Claim construction, equivalence and exemptions (experimental use, Bolar, safe harbor) depend on the individual case and current case law; prosecution files were not reviewed.
9. AI models make mistakes (wrong substituent mapping, wrong chain-length counts, overlooked provisos). Verify quotes and feature mappings against the original document before any decision.
